DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, 10-11, and 16-23 drawn to an optical communication system with variable bandwidth/spectral width channels, classified in class 359, subclass 124.
 - II. Claim 7, drawn to a transmitter with emitters, modulators and tunable filters, classified in class 359, subclass 188.
 - III. Claims 14-15 drawn to bandwidth allocation, classified in class 370, subclass 468.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Invention II is only drawn to a transmitter system with no mention of bandwidth allocation of invention III, spectral tuning of invention I, or variable bandwidth channels of invention I. Invention I is drawn to tuning of spectral width of channels and makes no mention of the transmitter and modulators of invention II, or the bandwidth allocation of invention III. Invention III deals only with the allocation of bandwidth and not to the variable bandwidth channels of invention I or the spectrum tuning of invention I.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2633

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, III, the search required for Group II is not required for Group I, III, and the search required for Group III is not required for Group I, II.
